30mm AMMUNITION

30mm APFSDS-T M929

USE
For use in the BMP 2 and BMP 3 vehicles equipped with the 30mm 2A42 cannon. This cartridge is designed to defeat light and medium armoured vehicles.

DESCRIPTION
This cartridge is an Armour Piercing Stabilized Discarding Sabot with Tracer (APFSDS-T) round. It consists of a subcalibre, fin stabilized, tungsten alloy projectile, launched by means of a lightweight sabot. Penetration, at any given range, is greatly enhanced compared to the older generation of APDS projectiles. The use of a specially designed single base propellant ensures good wear life characteristics.
